

THE *Farm Income* SITUATION

BUREAU OF AGRICULTURAL ECONOMICS
 UNITED STATES DEPARTMENT OF AGRICULTURE

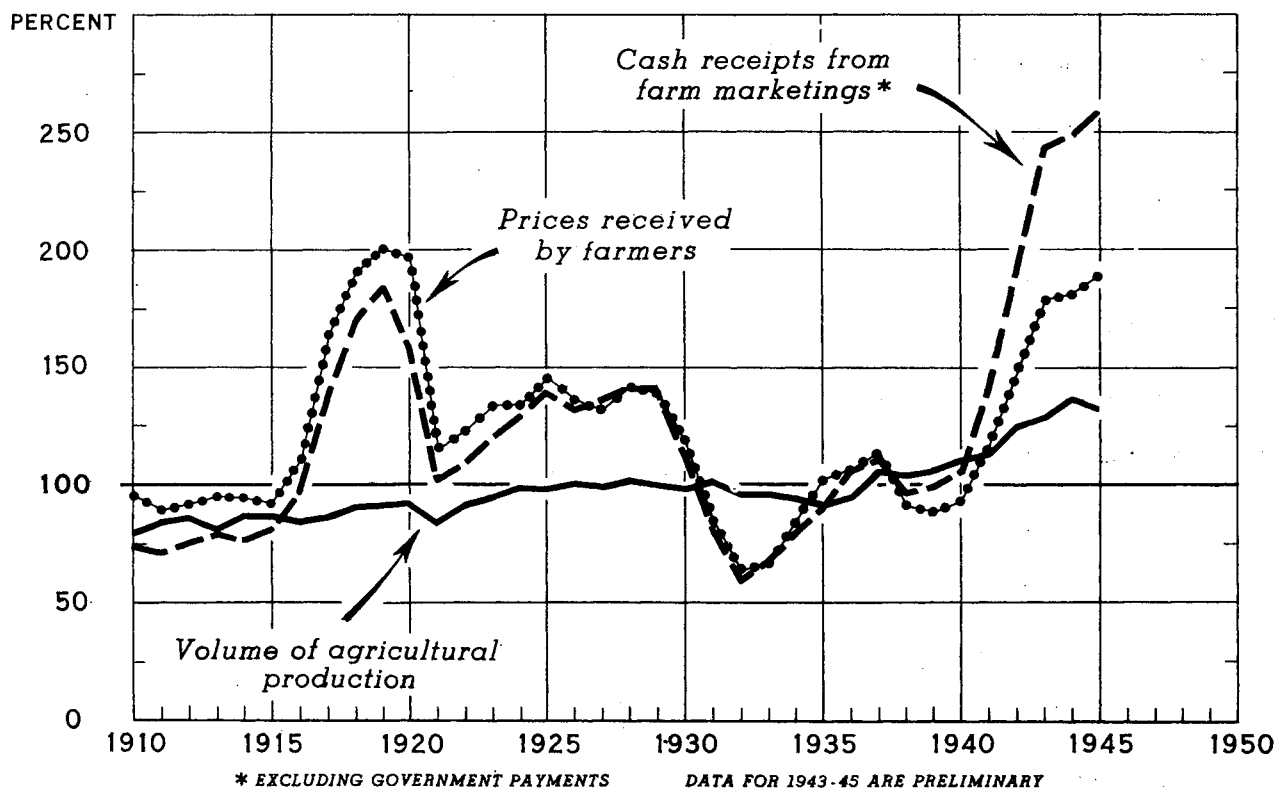

FIS-68

SEPTEMBER 1945

AGRICULTURAL PRODUCTION, PRICES, AND CASH RECEIPTS, UNITED STATES, 1910-45

INDEX NUMBERS (1935-39=100)

U. S. DEPARTMENT OF AGRICULTURE

NEG. 39408-A BUREAU OF AGRICULTURAL ECONOMICS

Prices received by farmers increased more rapidly from 1914 to 1919 than from 1939 to 1945, but the volume of production for sale or use in the farm home rose only 6 per cent during the earlier period whereas it increased nearly 25 per cent during the recent war years and gains in cash receipts, in the last 6 years have been much more pronounced than in the earlier period.

THE FARM INCOME SITUATION

Indications for October and November

Total cash receipts from farm marketings in October may be 15 to 20 percent above September, but probably will not equal the peak in October last year. Income from crops may be 20 percent higher than in September, with cash receipts from the late maturing cotton crop showing a greater than seasonal increase. The gain in cash receipts from livestock and livestock products will probably be somewhat less than usual, as the increase in income from meat animals may not be as great as in the past few years.

In November total cash receipts may drop 10 to 15 percent from the October levels, and may be as much as 10 percent below November 1944. Income from crops probably will be from 15 to 20 percent less than the previous month, as cash receipts from most crops decline seasonally. It is expected that cash receipts from livestock and livestock products will be about the same as in October.

Preliminary Estimates for September

Total cash receipts for September were about 2 billion dollars, 10 percent above August, and about the same as September 1944. The percentage gain in income from crops was somewhat less than last year. Cash receipts from cotton increased from August to September almost as much as in 1944, although immaturity of the crop in the northern part of the cotton belt is delaying harvesting somewhat. Relatively small marketings of apples kept September receipts from fruits at about the August level. Cash receipts from vegetables showed a greater decline from August than has occurred for the past few years, because of the postponement of potato marketing and a very severe drop in truck crop prices.

Cash receipts from livestock and livestock products in September declined about 5 percent, instead of remaining at about the same level as in August. The decrease was a result of lower prices for all types of meat animals except hogs. Cash receipts from poultry and eggs were about the same as in August, instead of increasing as they did last year.

For the first nine months of 1945, total cash receipts were about 14,330 million dollars, 3 percent above the income of 13,916 million dollars in 1944. Cash receipts from crops were about 16 percent greater than last year, with income from tobacco and the record wheat crop showing especially large gains. Cash receipts from livestock and livestock products were running about 5 percent below 1944, because of the decline in hog slaughter.

State and Regional Estimates for July and First Seven Months

Variations in cash receipts from crops by States and regions in July, compared with July 1944, were exceptionally large. Income from crops ranged from 8 percent below last year in the South Central Region to 76 percent above in the West North Central Region, with Nebraska showing the greatest increase in cash receipts from crops of any State in the country. Sales of wheat in all major producing States in the South Central Region were down, because of the drop in the production of winter wheat in this region in 1945 compared with 1944. Income from cotton also declined because of late maturity of the crop. In the West North Central Region, the production of winter wheat in 1945 rose sharply over 1944 and sales in all States made marked gains.

Moderate changes in income from livestock and livestock products occurred in July. Cash receipts in the Western Region fell 4 percent below last year, with income from hogs, butterfat, and calves dropping sharply. In the South Atlantic Region, rather pronounced increases in cash receipts from

SEPTEMBER 1945

- 4 -

broilers, especially in Delaware, and from eggs and milk, more than offset substantial reductions in cash receipts from hogs, so that income from livestock and livestock products rose 11 percent over 1944.

Gains were shown by cash receipts from crop for all regions during the first seven months, compared with the same period in 1944. The smallest increase, 4 percent, was in the East North Central Region. Income from wheat made marked gains in nearly all States in this region, but cash receipts from corn, cherries, and dry edible beans declined acutely. The greatest regional gain in cash receipts from crops was 39 percent in the West North Central Region. Cash receipts from wheat, corn and soybeans increased quite generally throughout the region.

Income from livestock and livestock products from January through July ranged from 12 percent below 1944 in the West North Central Region to 4 percent above in the North Atlantic Region. Cash receipts from hogs dropped precipitously in all States in the West North Central Region, and gains made by income from cattle, eggs, and milk, although marked, were small in comparison. In the North Atlantic Region, substantial increases in cash receipts from milk and eggs more than offset the rather severe declines in income from meat animals.

North Atlantic Region

Cash receipts from chickens, eggs, and milk, during July rose sharply in nearly all States in the region, to more than offset the decline in income from meat animals, and result in a gain of 6 percent over July 1944 in cash receipts from livestock and livestock products.

Outstanding increases in cash receipts from vegetables and tobacco accounted for most of the 12 percent rise in income from crops during the first seven months, compared with the corresponding period last year. Rather sharp gains in poultry and eggs and milk more than made up for declines in

CASH RECEIPTS FROM FARM MARKETINGS, BY REGIONS, 1944-45 COMPARED WITH 1939-43 AVERAGE

most of the other livestock items, to bring about an increase of 4 percent for livestock and livestock products.

East North Central Region

A gain of over 50 percent in cash receipts from wheat in the East North Central Region during July was largely responsible for the increase of 17 percent in income from crops. Substantial increases in cash receipts from poultry and eggs and dairy products were about equaled by declines in income from other livestock products, and cash receipts from livestock and livestock products showed no significant change.

During the first seven months, cash receipts from wheat rose abruptly, but acute declines occurred in income from corn, dry edible beans, and cherries. Cash receipts from hogs dropped sharply in all States, and income from livestock and livestock products for the region declined 6 percent.

West North Central Region

Cash receipts from wheat and corn rose sharply in July over July 1944 in the West North Central Region and income from crops showed an increase of 76 percent. Cash receipts from cattle rose sharply in all States except North Dakota and Kansas.

Income from wheat, corn, grain sorghums, and soybeans made outstanding gains during the first seven months, compared with 1944, and cash receipts from crops for the region rose 39 percent. Cash receipts from hogs dropped so sharply in all States that income from livestock and livestock products for the region showed a decline of 12 percent, in spite of substantial gains for cattle, eggs, and milk.

South Atlantic Region

A sharp increase in cash receipts from tobacco in July accounted for most of the gain of 27 percent over July 1944 in income from crops. During the period January through July cash receipts from tobacco, vegetables,

SEPTEMBER 1945

- 8 -

cotton, and peaches increased substantially, and income from crops rose 28 percent.

South Central Region

Cash receipts from wheat dropped rather sharply, and income from crops in July was 8 percent below a year earlier. Important gains were registered in the South Central Region in cash receipts from tobacco, cotton, truck crops, and fruit during the first seven months, compared with 1944, and income from crops increased 22 percent. The sharp drop in cash receipts from hogs was nearly offset by gains in income from other species of meat animals, eggs, and dairy products, and total cash receipts from livestock and livestock products declined slightly.

Western Region

Increased income from wheat, grapes, peaches, and truck crops was the most important contribution to the gain of 16 percent over 1944 in cash receipts from crops in July.

During the first seven months, income from truck crops and fruit made greatest gains compared with last year, and cash receipts from crops rose 10 percent. Cash receipts from livestock and livestock products dropped 7 percent for the seven month period as income from hogs, calves, and butterfat declined severely.

September 28, 1945.

Canadian Agriculture

Cash Receipts from Farm Marketings in Canada

Total cash receipts from the sale of farm products in Canada during 1944 rose to 1,752 million dollars, 25 percent above 1943. Income from wheat more than doubled in 1944 compared with 1943. Acreage planted was 38 percent larger than 1943, but somewhat smaller than the 1933-42 average. Yields were 5 percent higher than in 1943. Cash receipts from oats were 8 percent less than the year before, but income from barley gained 5 percent. Cash receipts from grains, seeds, and hay were 57 percent above 1943.

Income from vegetables, including potatoes, in 1944 rose 9 percent. Potato acreage was only slightly greater than in 1943, but yields were 12 percent higher.

Cash receipts from the sale of livestock in 1944 were 570 million dollars, 14 percent above 1943. Income from hogs increased 18 percent over the year before, and cash receipts from cattle and calves made a gain of 12 percent. Income from dairy products increased 8 percent compared with 1943, and cash receipts from eggs gained 3 percent.

CASH RECEIPTS FROM FARM MARKETINGS, UNITED STATES, 1939-45
 COMPARED WITH 1914-21

During the two world war periods, cash receipts from farm marketings were as follows:

Year	World War I	Year	World War II
	Mil. dol.		Mil. dol.
1914	6,050	1939	7,877
1915	6,403	1940	8,343
1916	7,750	1941	11,157
1917	10,746	1942	15,316
1918	13,461	1943	19,339
1919	14,602	1944	19,790
1920	12,608	1945 <u>1/</u>	20,400
1921	8,150		

1/ Tentative.

As indicated in section (A) figure 1, the rapid percentage rise in cash receipts from farm marketings was very similar during these two periods, but somewhat greater in the more recent period. The most rapid increase occurred between 1915 and 1918 in the earlier period, and between 1940 and 1943 in the later period. In interpreting these data, it should be remembered that the starting points for the two periods were on different levels. In 1939, cash receipts from farm marketings were 30 percent higher than in 1914; prices received by farmers, 6 percent lower; and volume of agricultural production, 23 percent higher.

Prices received by farmers increased according to the same general pattern during the two periods. The fastest rise in the earlier period was between 1916 and 1918, to a level 102 percent higher than 1914; there was little change from 1918 to 1920. In the later period, the sharpest increase occurred between 1941 and 1943, to a level 102 percent higher than 1939, with a leveling off between 1943 and 1945.

In the World War II period, volume of agricultural production played a greater part, and prices a smaller part, in bringing about increased cash receipts, than in the World War I period. Not only was there a greater percentage increase in volume of production in the second period than in the first, but gains were greater in absolute terms, because the volume was higher at the beginning of the second period than at any time during the first period. Consistently large gains brought volume of production in 1944 to 28 percent above 1939, followed by a slight decline in 1945. In the earlier period, volume of production did not begin to increase until 1917, reaching a peak in 1920 only 7 percent above 1914.
